

## Avansys Lab

### Lab Overview

As part of Avansys Solutions, the Lab is a state-of-the-art **innovation incubator**. It functions as an "innovation factory" by feeding back the learning from Avansys project execution to continually assess the potential for spinning-off ground-breaking innovations.

### A coming knowledge revolution

Peter Drucker predicted the knowledge economy over 50 years ago. A series of technologies are about to converge to drive the dawn of the "**Knowledge Economy 2.0**".

We strongly believe the latest advancements in conversational AI coupled with interactive knowledge sharing tools and communication and collaboration platforms will converge to drive the next revolution in human work. In short, significant innovation will accelerate and simplify the process of turning information into meaning.

### Our current work

Imagine the power of AI and collaborative human insight, weaved together into a DNA-like co-evolving knowledge thread. Further picture a seamless integration of tools such as Miro Board, ChatGPT, and Microsoft Teams into an environment that curates evolving threads of AI-enhanced, collective human knowledge. This is the future our Lab is looking to describe and prototype into working solutions.

More specifically, our current work is focused on exploring the best strategies to leverage open-source **AI as a value multiplier to human intuition and expertise**. We are also experimenting with ways to intuitively interface with conversational AI, particularly for collaborative work.
